

DEVELOPING SIMULATED PATIENTS

What is simulation?

**Something that is made to look,
feel, or behave like something
else especially so that it can be
studied or used to train people**

It facilitates learning through immersion, reflection, feedback and practice, but minus the risks inherent in a similar real life situation.

What types of simulation are there?

HIGH FIDELITY

MEDIUM FIDELITY

LOW FIDELITY

Simulated patient (SP)

OUR COHORT

RECRUITMENT

Challenges

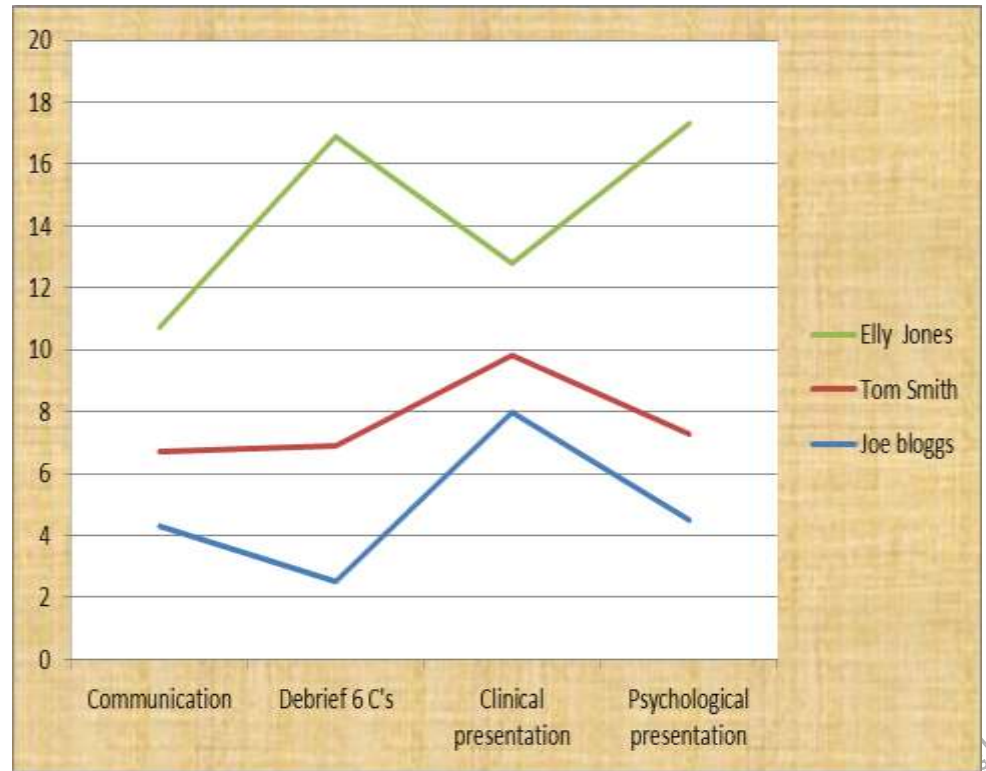

- Organisational
- Standardisation
- Quality
- Efficiency
- Relevancy
